

May 27, 2013

Hi Milo:

The DVD includes geologic info for HAFE NHP. It includes a descriptive guide for each place we went last month: Maryland Heights, the AT from US 340 to Chestnut Hill Rd, and the Shenandoah River floodplain (includes Virginius Island and the “wetlands”).

All of the photos I took, and the illustrations I made for the write up are also included. A file tree appears below to show what’s where.

Let me know when you have questions or need any other info from me.

Cheers,

Tony

### **File Structure on the DVD**

#### Folder: Maps and Reports

- Geology guides to Maryland Heights, Loudon Heights, Virginius Island-Canal Wetlands
- Bibliography of geologic publications relevant to HAFE
- JPEG’s of trail maps showing geologic points of interest on each route, and original Corel drawings in case you want to import them into a graphics program (I can furnish these most file formats, just let me know)

#### Folder: 2013-04-16 harpers ferry MD heights

- all of the photos I took the day we went to MD heights, in order of our route
- sub folder: maryland heights photos in guide includes the photos used in the geology guide, renamed by stop. Some of these have labels or arrows I added in Corel, so I included the graphics files for those as well

#### Folder: 2013-04-19 harpers ferry Loudoun Virginius canal

- all of the photos I took the second day along the other routes, in the order we visited them
- sub folder: photos in guide includes the photos used in the geology guides, organized by place. Includes JPEGs and original graphics files of several photos with added labels, lines, etc
